

Ali Zeinodin

Software Engineer

alizeinodin79@gmail.com
(+98)9336011397
Remote — Available in European/US time zones

DoB: 2000-10-27 Marital Status: Single Military Service: Educational Exemption

Profile Summary

Software Engineer with 6 years of professional experience and a strong foundation in **C/C++**, object-oriented design, and systems thinking. Hands-on experience building desktop applications with **C++, Qt Quick, and QML**, including a full chess engine with bidirectional C++/QML integration, advanced game rules, file persistence, and Linux/Windows packaging.

Solid background in software architecture (OOP, design patterns, modular systems, clean code) and competitive programming. Comfortable delivering complex features end-to-end, writing maintainable code, and collaborating in Agile teams. Also experienced with backend stacks (PHP/Laravel, Python) and modern tooling (Git, CMake/qmake, Docker, Linux).

Enthusiastic about performance, reliability, and problem-solving — continuously sharpening algorithmic and engineering skills through contests and real-world projects.

Education

September 2025 - Present

Master of Software Engineering

Branch: Computer Engineering
Institute/University: Islamic Azad University, Science and Research Branch
GPA: A
Top-ranked computer science in the Middle East

September 2020 - September 2024

Bachelor of Computer Science

Branch: Computer Engineering
Institute/University: Bu-Ali Sina University
GPA: A
Graduated top of class (1/55)
Top-ranked computer science in the Middle East

Work Experience

March 2024 - Present

Senior Backend Developer

MCI

Tasks and Achievements

Project: **SOAR & VMS** Platform for **MCI (Hamrah-e-Avval)** — Outsourced

- Working as a Backend Developer and Software Engineer on a large-scale cybersecurity-related SOAR/VMS system developed for MCI, the largest mobile operator in Iran.
- Responsible for analyzing business requirements, designing the system architecture, and implementing backend services within a Microservices and Modular structure.
- Developed multiple system features using PHP, Laravel, MySQL, Redis, Docker, Linux, Vue.js, Vuetify, Swagger, and RESTful APIs, following clean code and self-testing principles.
- Collaborated closely with the team and product owner in an Agile (Scrum) environment to refine requirements, design workflows, and deliver scalable and maintainable solutions.
- Implemented security-focused development practices aligned with the nature of the project (cybersecurity), ensuring data integrity, access control, and secure communication between services.
- Contributed to UI panel development for system operators using Vue.js and Vuetify, enhancing usability and operational efficiency.
- Conducted initial acceptance testing, prepared technical documentation, and participated in deployment and environment setup on production servers.

Tools and technologies used: PHP, Laravel, MySQL, Redis, Docker, Linux, Vue.js, Vuetify, Swagger, PHPUnit, Apache, npm, Microservices, Jira, Confluence.

July 2023 - April 2024

Backend Developer

Langeek

Tasks and Achievements

- Worked as a Backend Developer on a comprehensive language-learning platform designed for non-Persian speakers, similar in concept to Duolingo.
- Contributed to the refactoring of existing backend services to improve maintainability, performance, and scalability, following Clean Code and self-testing principles.
- Developed new features and microservices, including: Picture Dictionary Service, NLP Analyser Module, User Panel and internal management features.
- Collaborated with cross-functional teams using Python, PHP, Laravel, Symfony, MySQL, Redis, Docker, Linux, React, TypeScript, Redux, Doctrine ORM, TailwindCSS, and JSX/TSX.
- Improved system stability and code quality through consistent refactoring, automated testing, and following best practices in API design and caching.
- Benefited from a strong team culture focused on continuous learning, especially through regular study of technical books and knowledge-sharing sessions.

Tools and technologies used: Python, PHP, Laravel, Symfony, MySQL, Redis, Docker, Linux, React, TypeScript, Redux, Doctrine ORM, TailwindCSS, JSX/TSX, ElasticSearch, RabbitMQ, NextJS.

August 2023 - July 2024

Team Lead & Software Engineer

Bu-Ali Sina University

Tasks and Achievements

- Led a small team of 3 to design and develop a software system for managing university telephony, integrating legacy PBX systems with a mobile application.
- Developed the backend architecture using PHP, Laravel, and Neo4j, ensuring modularity, reliability, and error prevention in complex phone routing scenarios.
- Collaborated closely with end-users and university IT staff to gather requirements and translate them into functional specifications.
- Coordinated with front-end and UI developers to deliver a seamless user experience.
- Delivered a robust system capable of generating importable reports for the existing Goyan platform.

Tools and technologies used: PHP, Laravel, Neo4j, Docker, Linux, React, TypeScript, TailwindCSS.

June 2022 - April 2023

Full-Stack Developer

Aazem

Tasks and Achievements

- Developed custom survey modules using PHP and Yii framework for a LimeSurvey-based survey application.
- Enhanced legacy code maintainability and implemented database normalization.
- Added multilingual support and documented project APIs using OpenAPI standards.

Tech stack: PHP, Yii, JavaScript, HTML/CSS, jQuery, Docker, Linux

June 2021 - April 2022

Backend Developer

National Elite Foundation

Tasks and Achievements

- Developed the backend for Ghazi-Yar, a judicial assistant software for analyzing past court cases and providing suggestions for new cases.
- Designed databases, developed REST APIs, and integrated with AI modules for predictive recommendations.
- Implemented unit and feature testing, ensuring reliability and maintainability.
- Produced technical documentation to support team development and future enhancements.

Tech stack: Python, Django, JavaScript, HTML/CSS, Pandas, NumPy, Matplotlib, Docker, Linux

September 2018 - October 2020

Freelance Web Developer

Self-Employed / Freelance

Tasks and Achievements

- Developed custom modules and themes for WordPress and vBulletin, including plugins for a game development forum.
- Built and maintained web applications using PHP, Laravel, HTML/CSS, Bootstrap, enhancing functionality and user experience.

Tech stack: PHP, WordPress, vBulletin, HTML/CSS, Bootstrap, JavaScript

Skills

C/C++ · Qt / QML · OOP · Design Patterns · Software Architecture · CMake / qmake · STL · Algorithms · Data Structures · Qt Quick Controls · Linux · Git · Debugging · Optimization · Requirement analysis · Testing · Docker · Python · PHP · Laravel · JavaScript · GoLang · MySQL · Redis · MongoDB

Language

English

Persian

Projects

May 2021

Chess Game (C++ / Qt)

For: University courses

A fully functional desktop chess application written in **C++** and **Qt Quick/QML**. Implemented an OOP game engine (pieces, board, players), advanced rules (check/mate, castling, en passant, promotion, undo), C++ ↔ QML bridging with Q_PROPERTY and signals/slots, animated Material UI, file-based game persistence, and packaged builds for Linux and Windows. Course score: 173/100.

Link: https://github.com/alizeinodin/Chess-Game

March 2021

IMDB Practice (C++)

For: University practice

Domain modeling practice similar to IMDB, implemented in **C++** with focus on OOP structure, data organization, and maintainable class design.

Link: https://github.com/alizeinodin/imdbpractice

November 2023

KarLearn

For: University courses

An educational platform similar to SabzLearn for online courses.

Link: https://github.com/alizeinodin/karlearn

October 2022

SMSApi Laravel Package

For: FOSS

A Laravel package for integration with the SMS.ir service and managing SMS services.

Link: https://github.com/alizeinodin/SMSApi

May 2022

Chapar Messenger

For: Self-Employed

A simple messaging platform with real-time chat features.

Link: https://github.com/alizeinodin/chapar

April 2022

Wooden door

For: University courses

A job platform similar to JobVision for connecting employers and candidates.

Link: https://github.com/alizeinodin/woodenDoor

August 2021

Kiwi Event System

For: Student association of university

An event management system for the student association.

Link: https://github.com/alizeinodin/kiwi

October 2020

Mafia Game

For: FOSS

A multiplayer Mafia game with user management and game logic.

Link: https://github.com/alizeinodin/Mafia

Honors

August 2021

1st Place, ICPC Western Iran Regional Contest

October 2024

Top Performer, PHP/Laravel Olympiad

Link: https://quera.org/media/public/certificate/2a49865c95f0404e96d375e3298ddef2.png

March 2024

9th Place, Software Engineering Contest, Quera (IranServer)

Link: https://quera.org/contest/assignments/81560/scoreboard/

September 2023

3rd Place, AI Competition
